WORK EXPERIENCE

Jr. Software Engineer

Cognizant Technology Solutions

07/2019 - Present

Pune, India

Project

- Developing new functionalities for existing client applications using Angular8, HTML, CSS, Bootstrap.
- Client is having 2 portals; one is for End-users and another one is for employees.
- My role is to develop a functionality for employee's portal, so employee can fill from on behalf of user and submit the form for review.
- Client divided type of users into 37 categories and we are creating form for all 37 categories in employee's portal.
- After successfully finishing development of form have to do unit testing for that particular category.
- Have to fix pre-built functionality issues. Like data mapping issues, UI issue, Old Functionality change required from client, etc.

Training

Cognizant Technology Solutions

Achievements/Tasks

- Training in Full Stack involving C#, ASP.NET, Angular, SQL Server.
- Successfully cleared three phases of evaluation.
- Maintained coding standards as per guidelines thus reducing the complexity and improving maintainability of the code.

PERSONAL PROJECTS

Tweet App

- Application that allows user to post tweet, view all users tweets, like/dislike other user tweet and reply them..

Survey App

- In this application we built dynamic template form based on Angular 8 to send it to any users through mail then user can fill form on his/her requirement for form-controls.
- User can import and export form into pdf. This application can be accessed on local server through form link sent on mail.

Vehicle Reservation System

- Platform where users can book vehicle including four and two wheelers and they are charged according to the booking time period. It also allows users to add their vehicles to be made available for booking.
